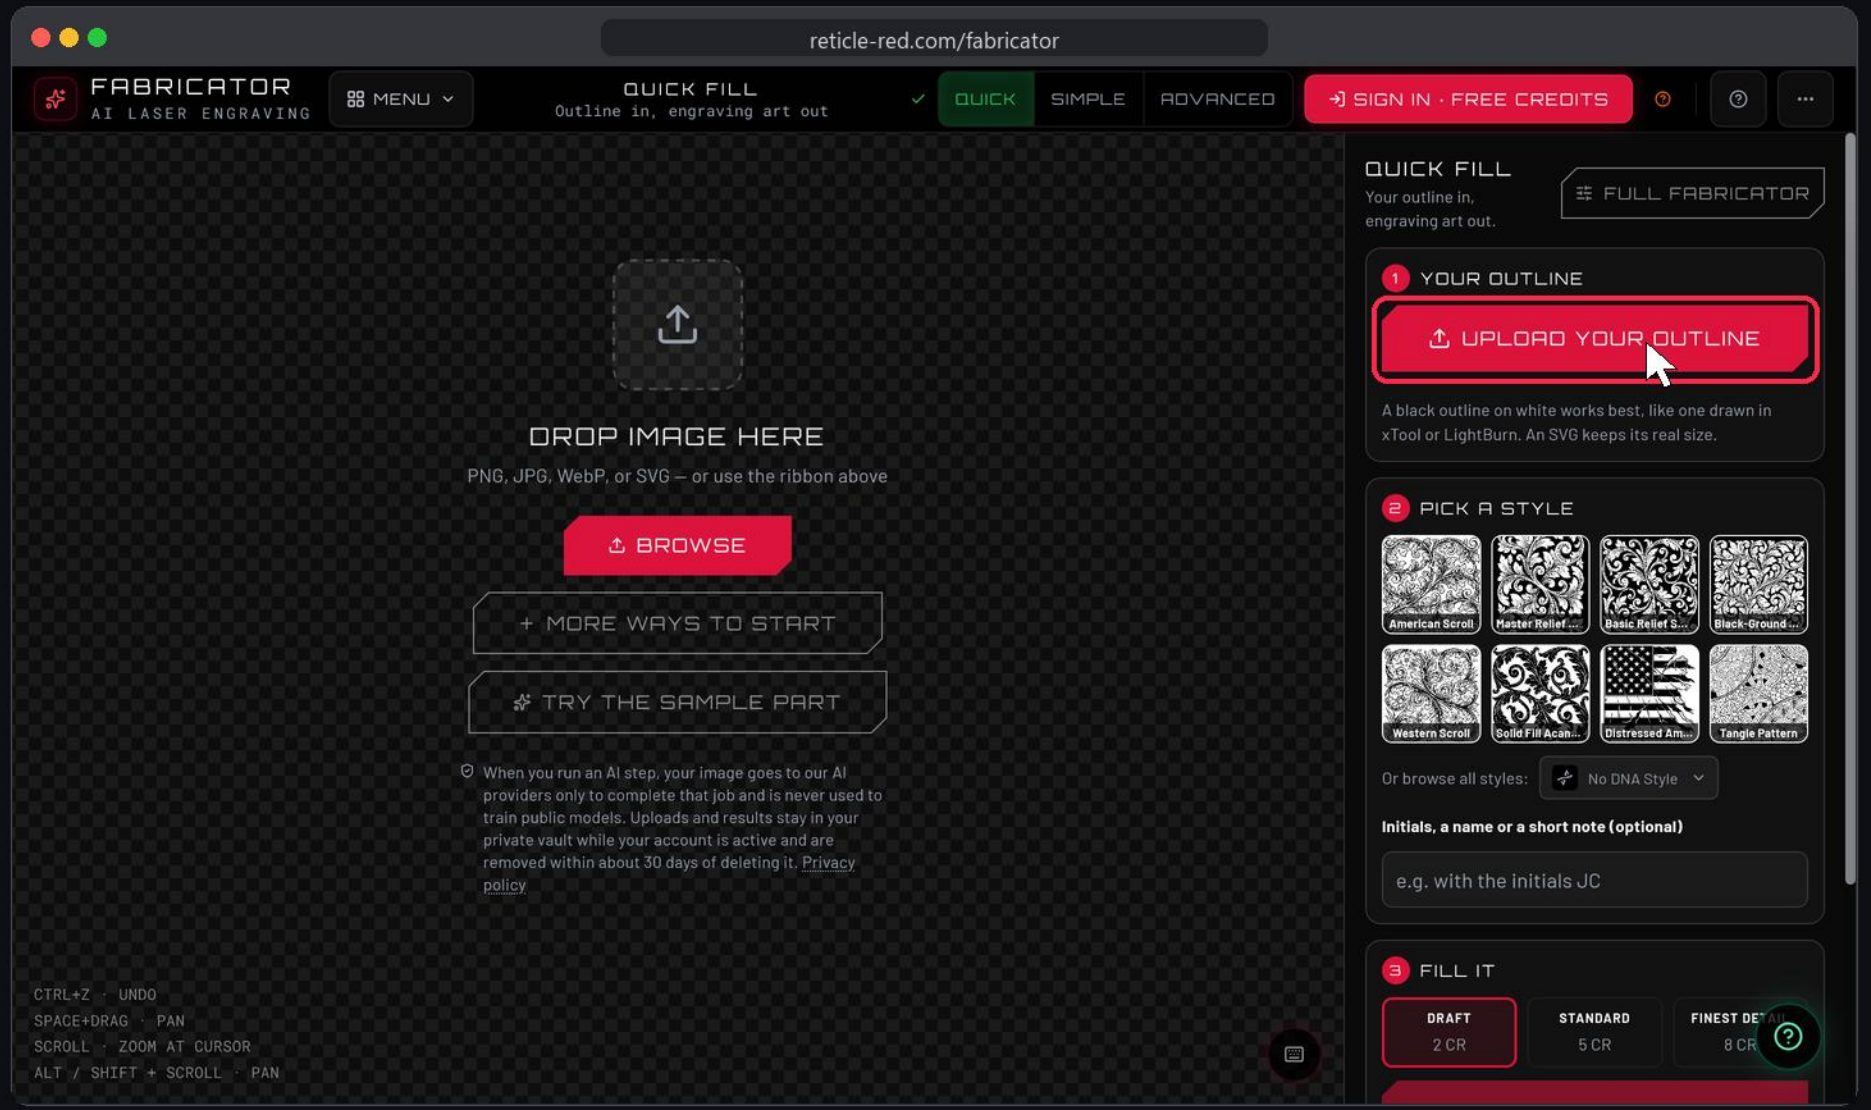
QUICK FILL ON A MAC

Step 1 of 4 · Load



STEP 1 OF 4

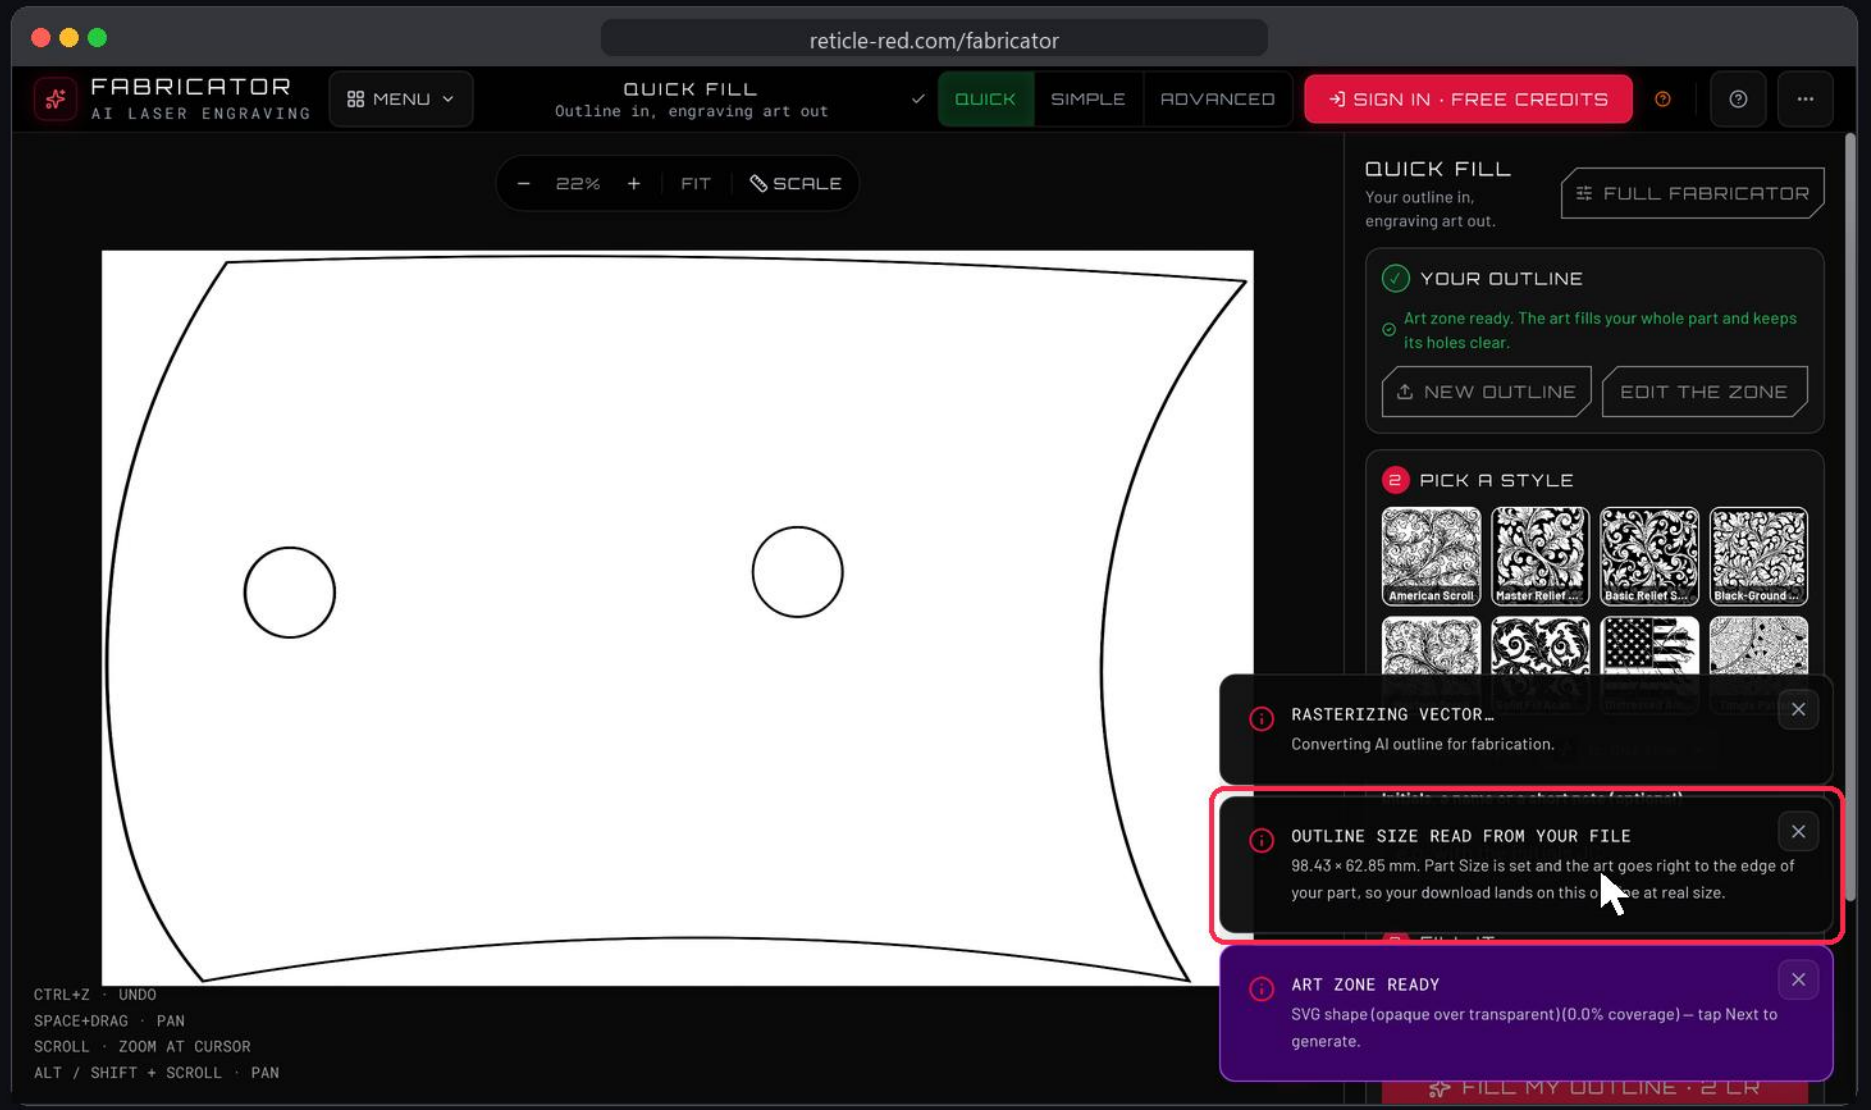
Load your outline

Open reticle-red.com/fabricator in Safari. Quick Fill opens on its own.

Click UPLOAD YOUR OUTLINE, then pick your .svg in the Mac file window.

In xTool Creative Space, export the outline as SVG. An SVG keeps the real size; a PNG does not.

CLOSE-UP



STEP 2 OF 4

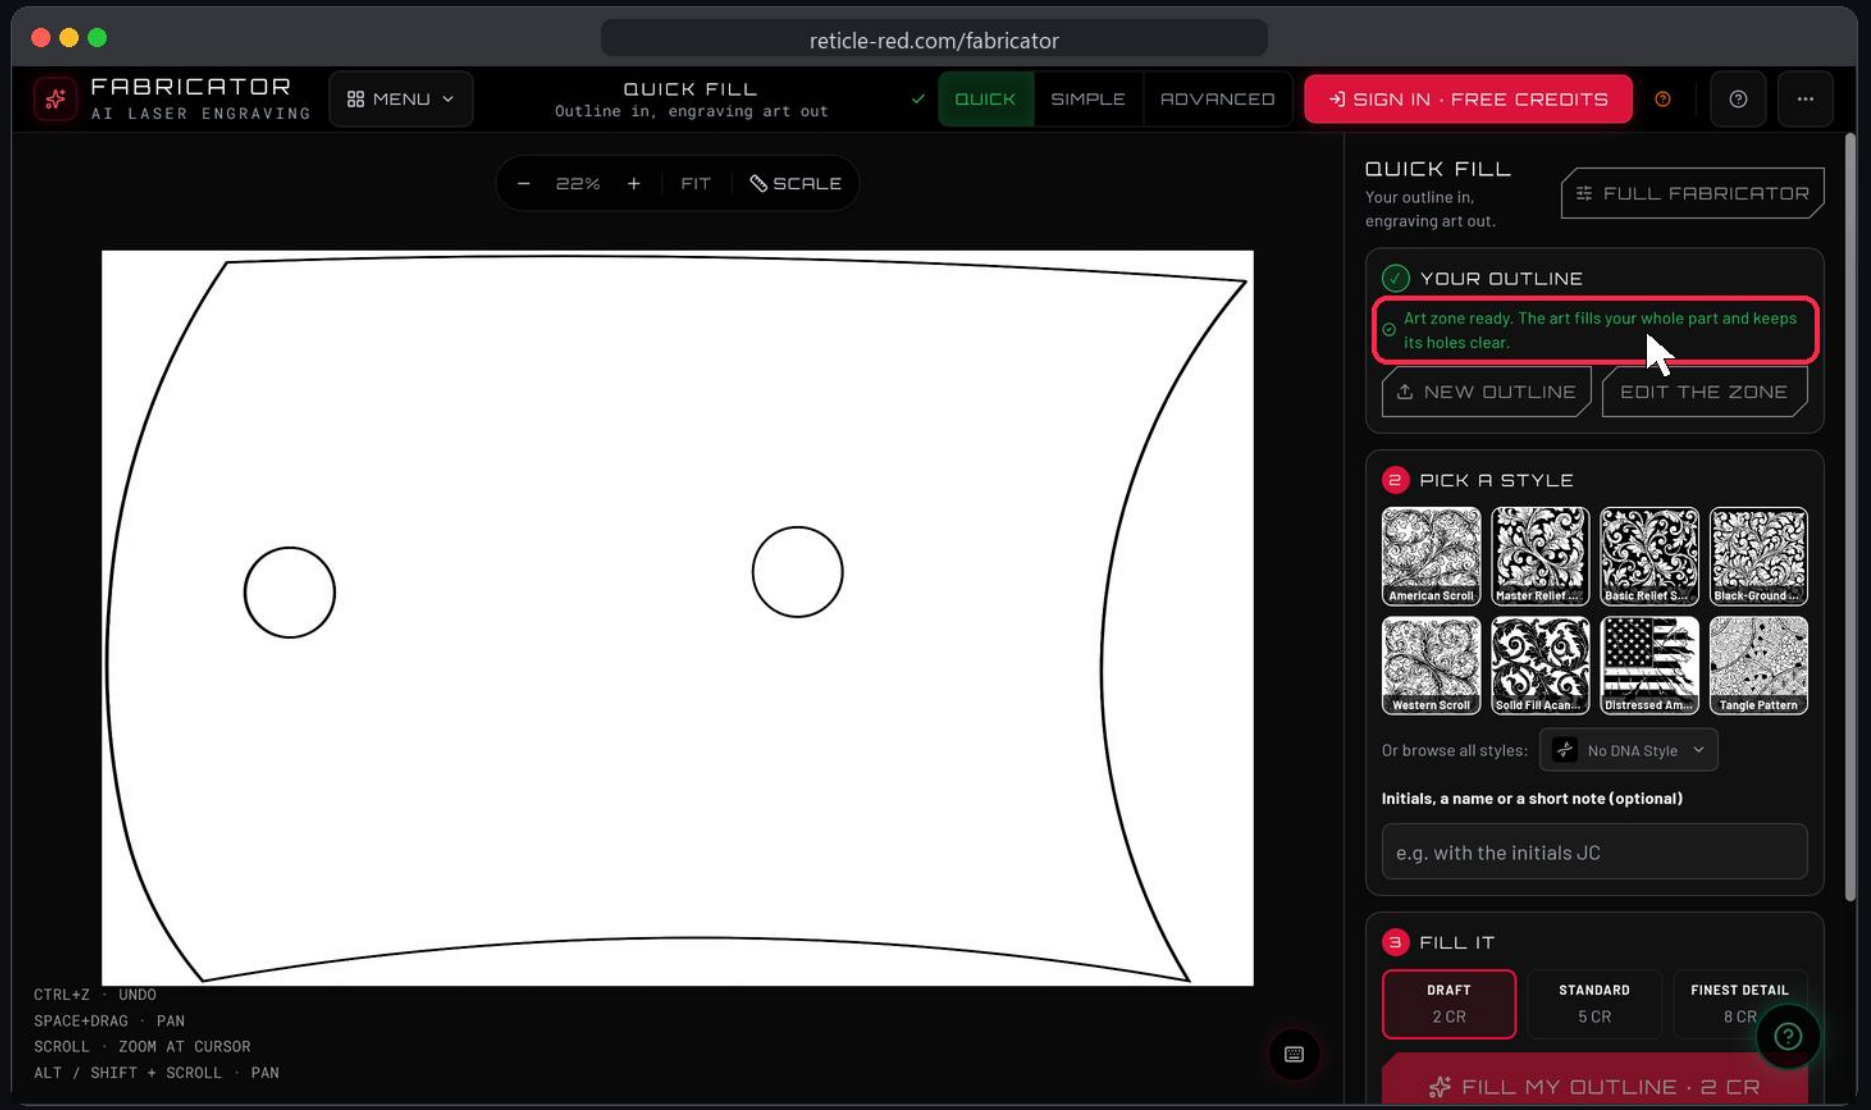
The size comes from your file

A note shows the size it read: 98.43 × 62.85 mm here.

Part Size is now set, and the art will run right to the edge of your part.

Notes slide in at the bottom right and fade after a few seconds.

CLOSE-UP



STEP 2 OF 4

The art zone fills itself

Quick Fill paints the inside of your outline for you: the whole grip, with both screw holes left clear.

The pink area on the canvas is where the art will go.

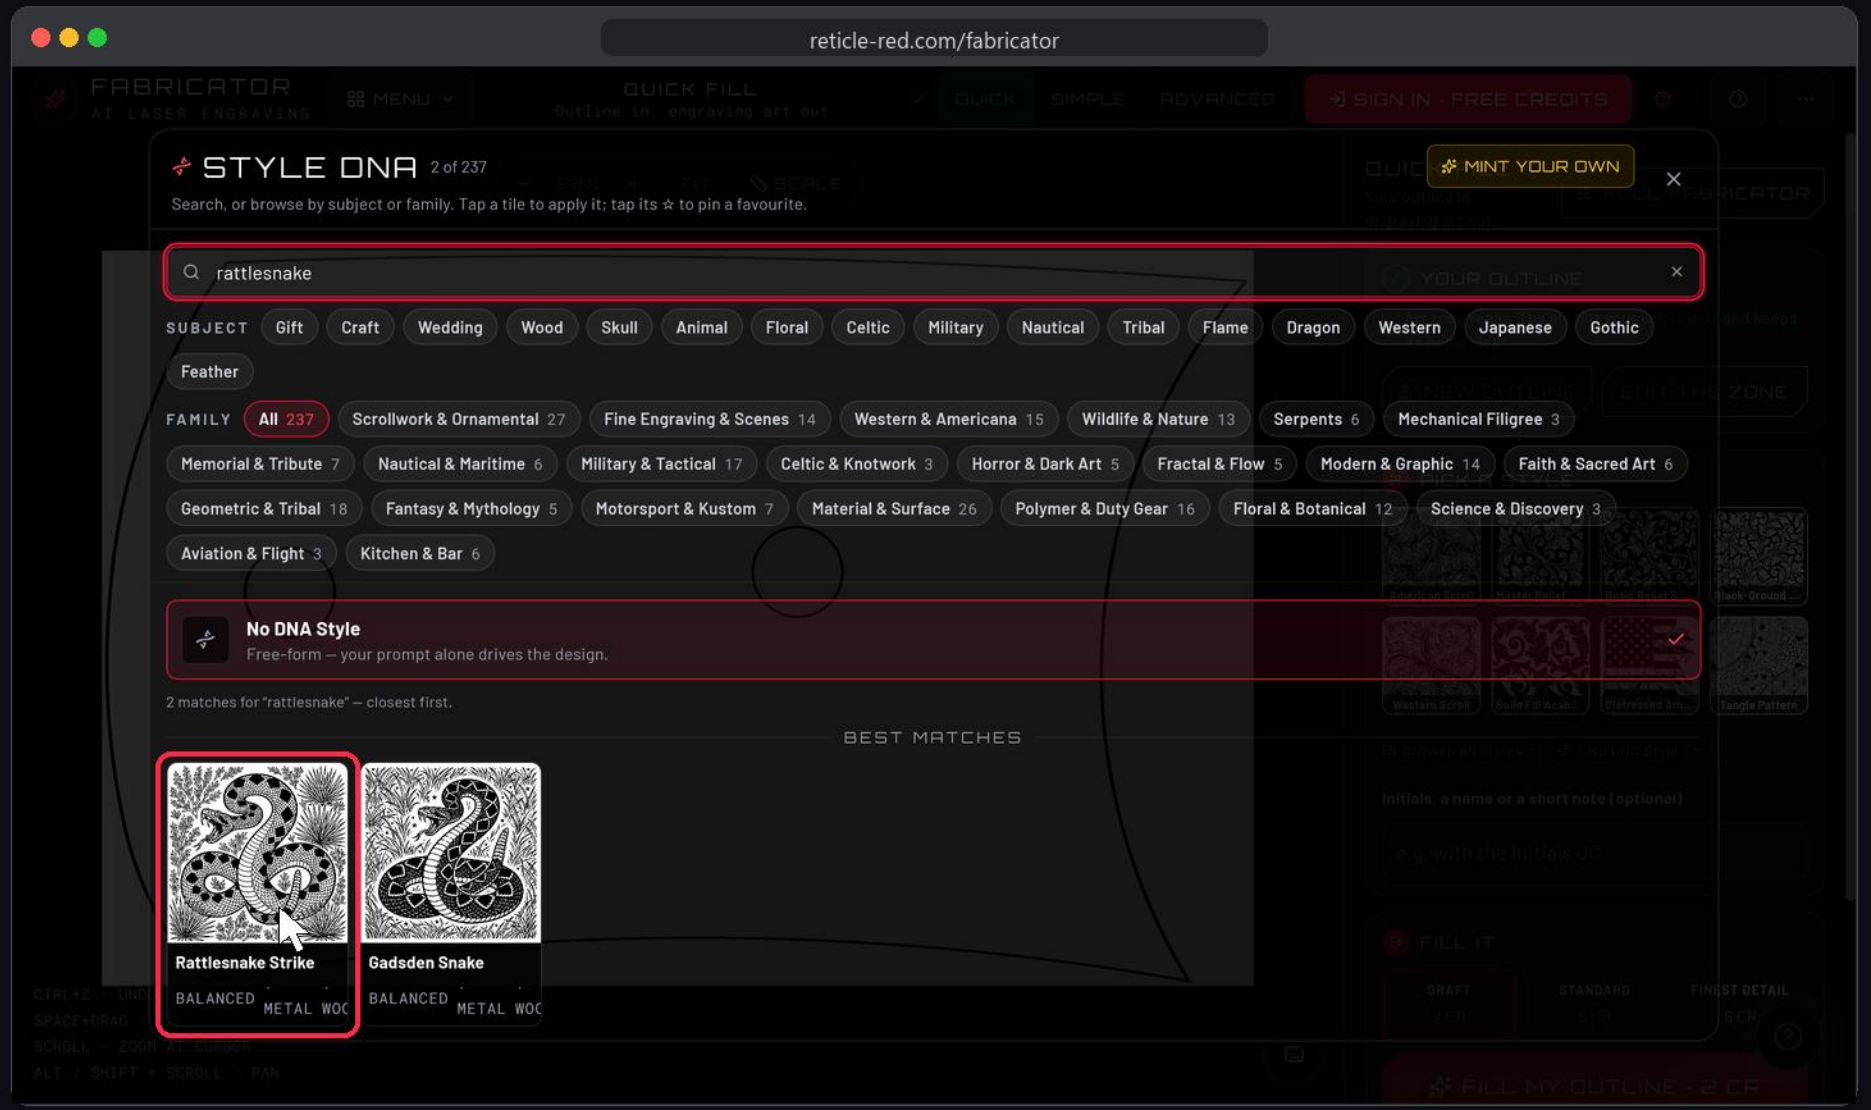
Step 3 of 4 · Generate



STEP 3 OF 4

Pick a style

Eight favourites sit right in the panel. For anything else, open the style menu under them and search.

Here: search "rattlesnake" and click Rattlesnake Strike.

All 237 styles are in this browser, sorted by subject and family.

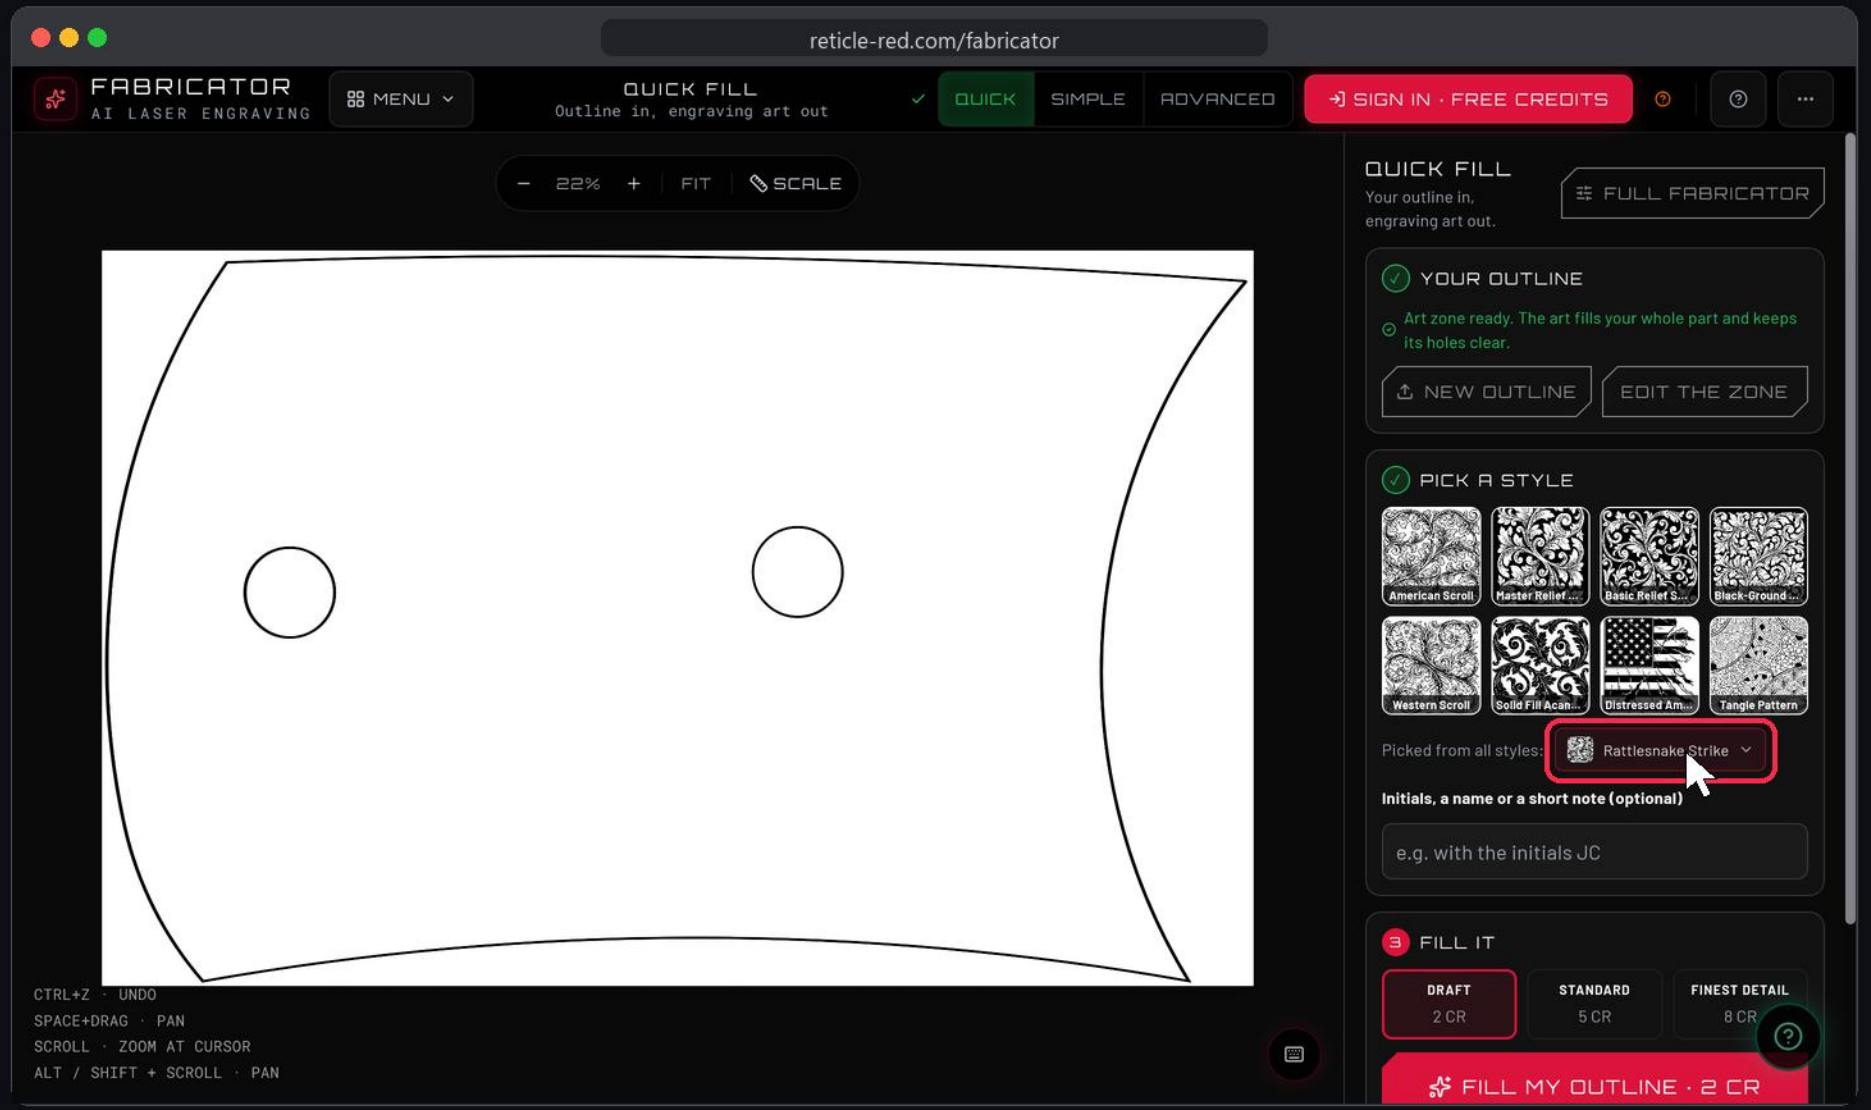
Step 3 of 4 · Generate



STEP 3 OF 4

Your style is set

The panel shows “Picked from all styles: Rattlesnake Strike”.

Want initials or a name in the design? Type them in the box below.

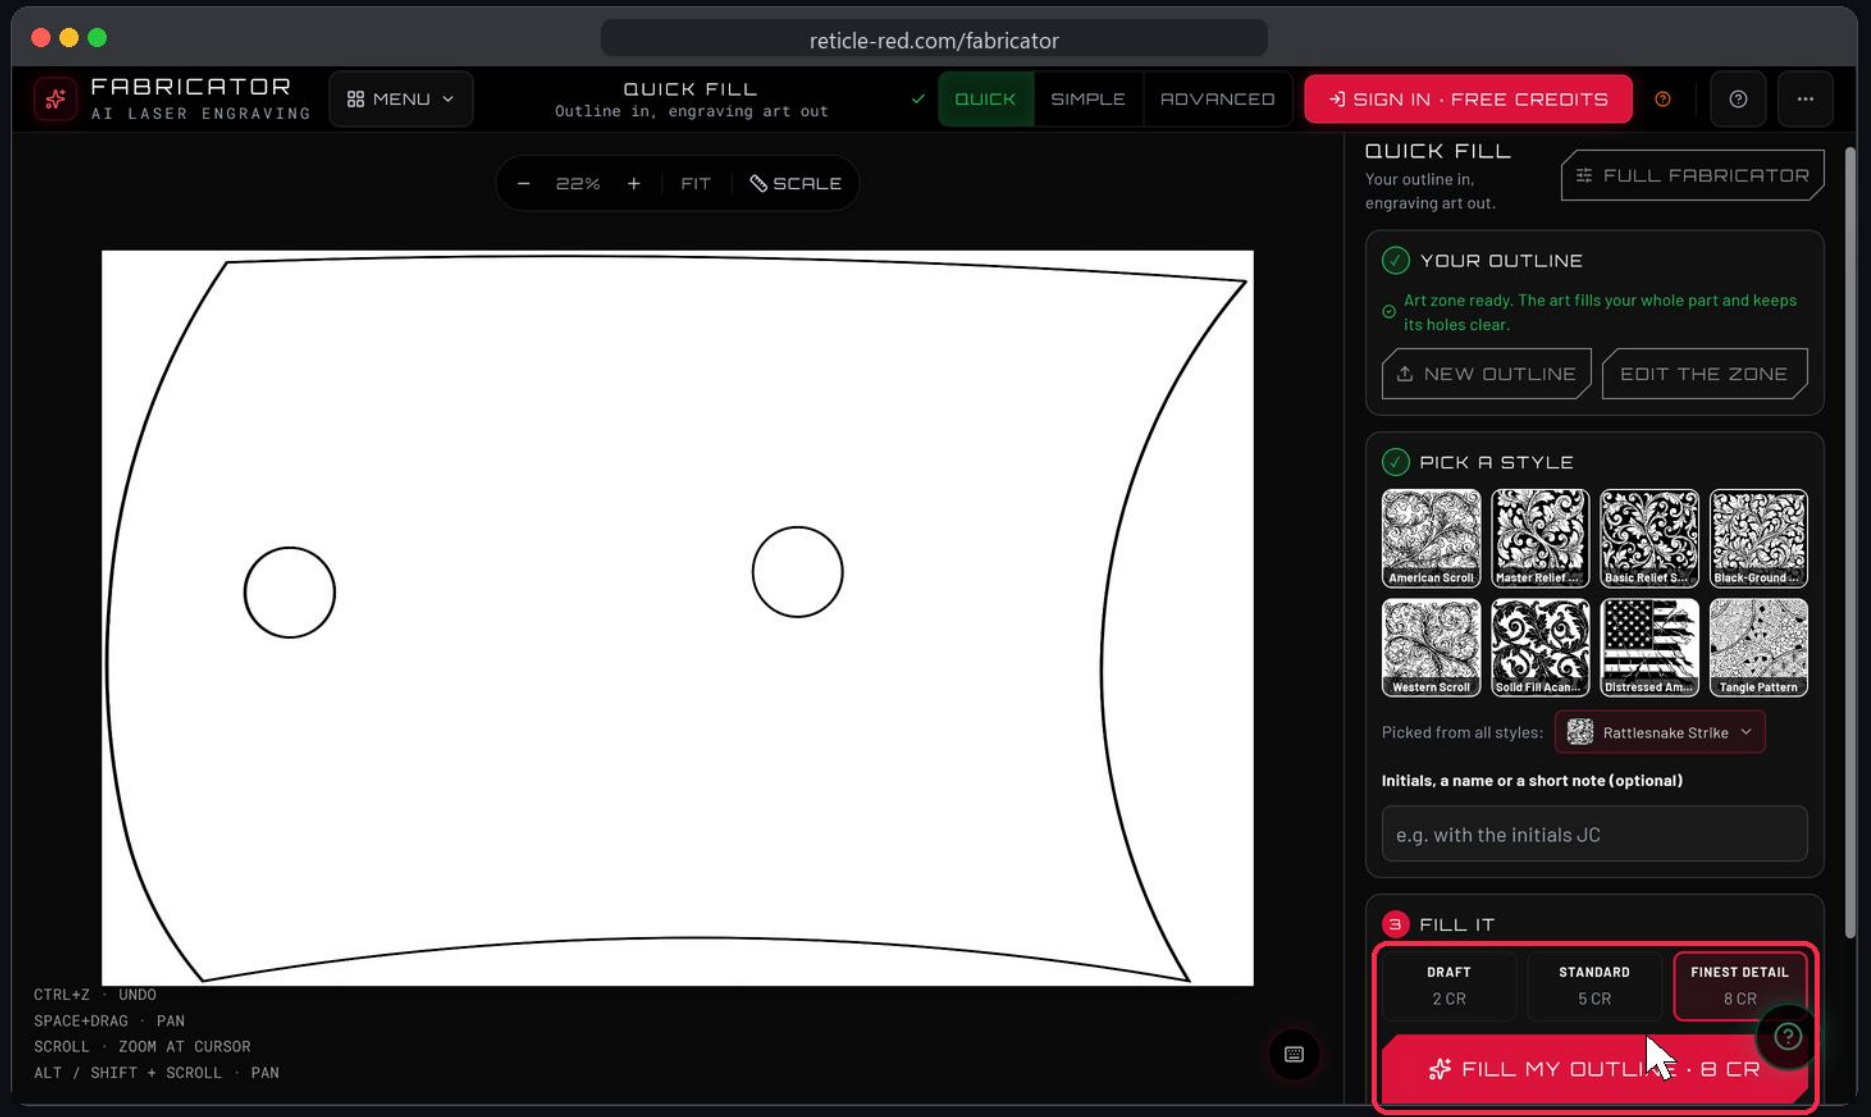
QUICK FILL ON A MAC

Step 3 of 4 · Generate



STEP 3 OF 4

Choose the detail, then fill

DRAFT 2 credits, STANDARD 5, FINEST DETAIL 8. This run used FINEST DETAIL.

Click FILL MY OUTLINE · 8 CR. You see the price before anything runs, and a failed run refunds itself.

Sign in first. Your credits show at the top right; new accounts get 12 free.

Screenshot from the real run (phone)

STEP 3 OF 4

While it fills

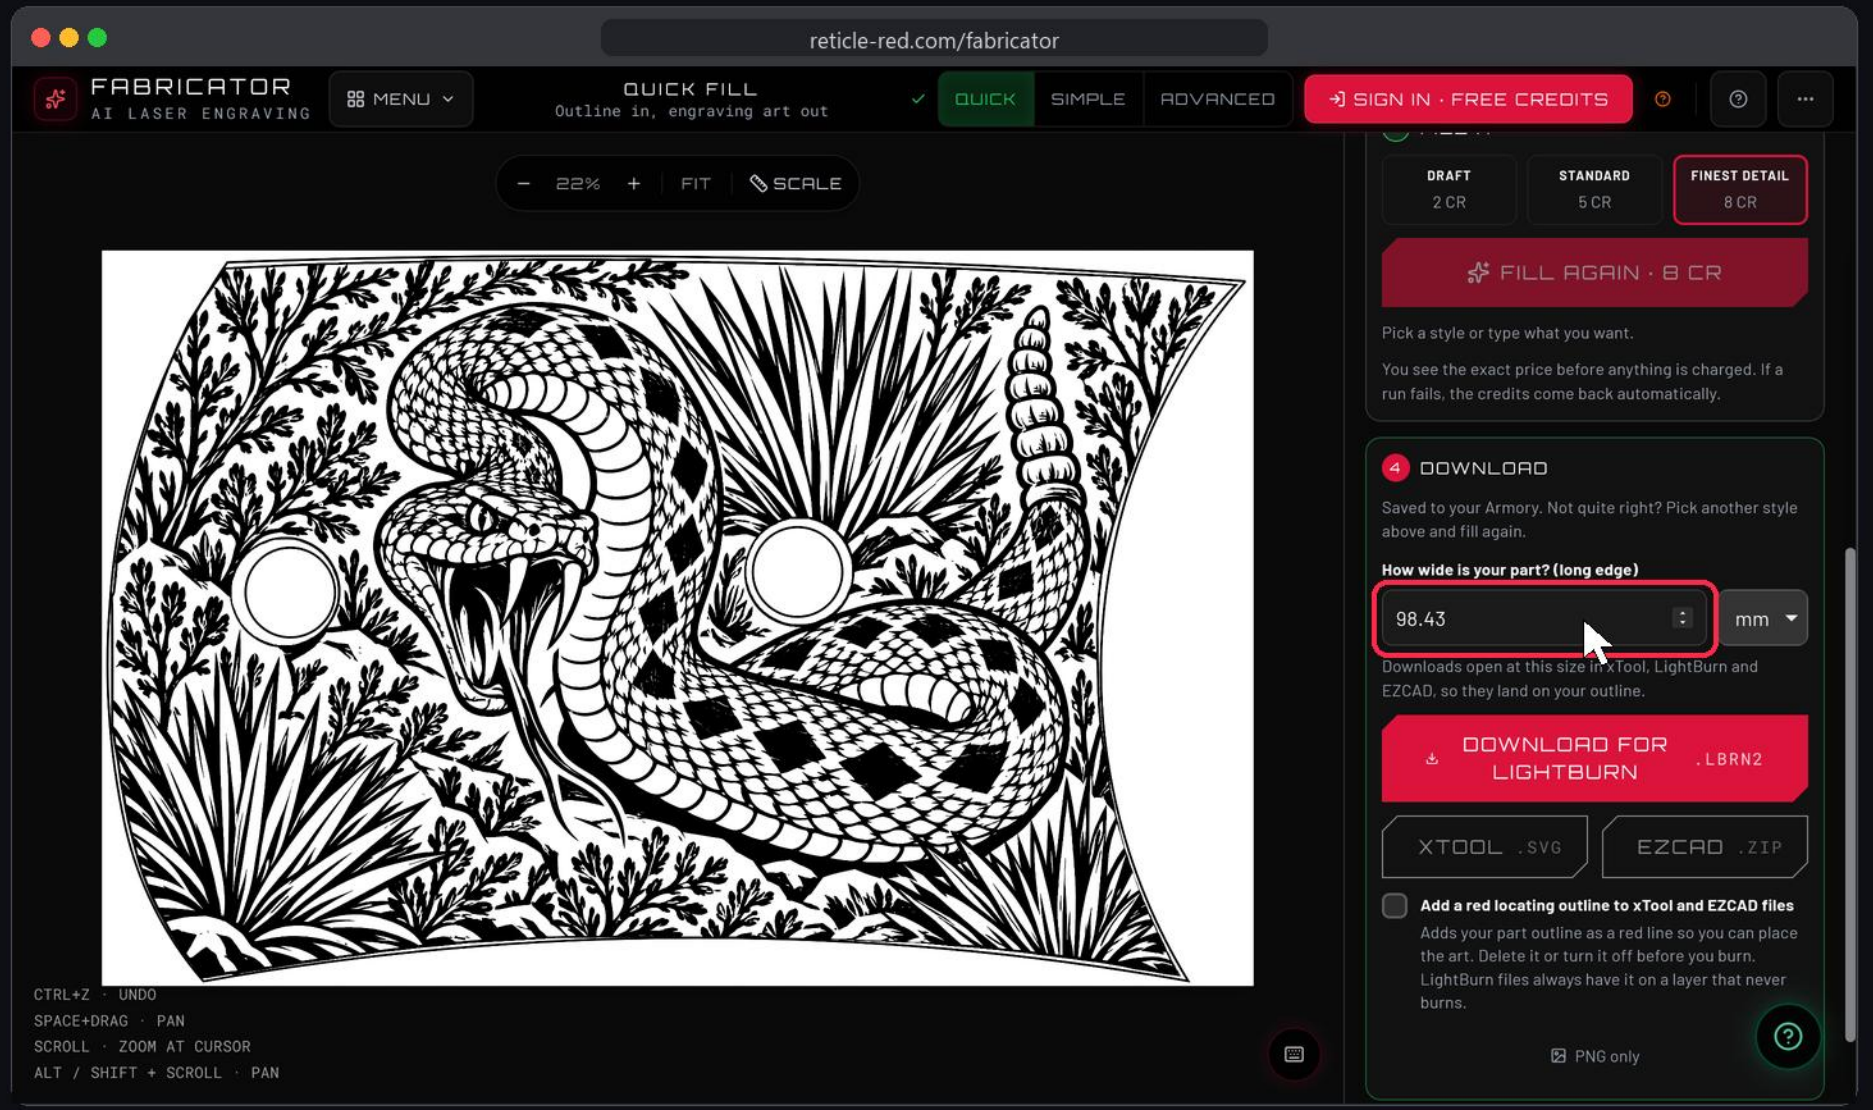
A progress card shows over your outline, the same on a Mac or a phone.

This FINEST DETAIL run was wrapping up at 123 seconds. DRAFT is much quicker.

You can hide the card; the run keeps going and lands in your Armory.

QUICK FILL ON A MAC

Step 4 of 4 · Download



STEP 4 OF 4

Check the size

Your art appears on the outline, and it is saved to your Armory. This is the real result of that run.

The size box under DOWNLOAD shows 98.43 mm: the long edge, read from your SVG.

Uploaded a PNG instead? Type your part's long edge here before you download.

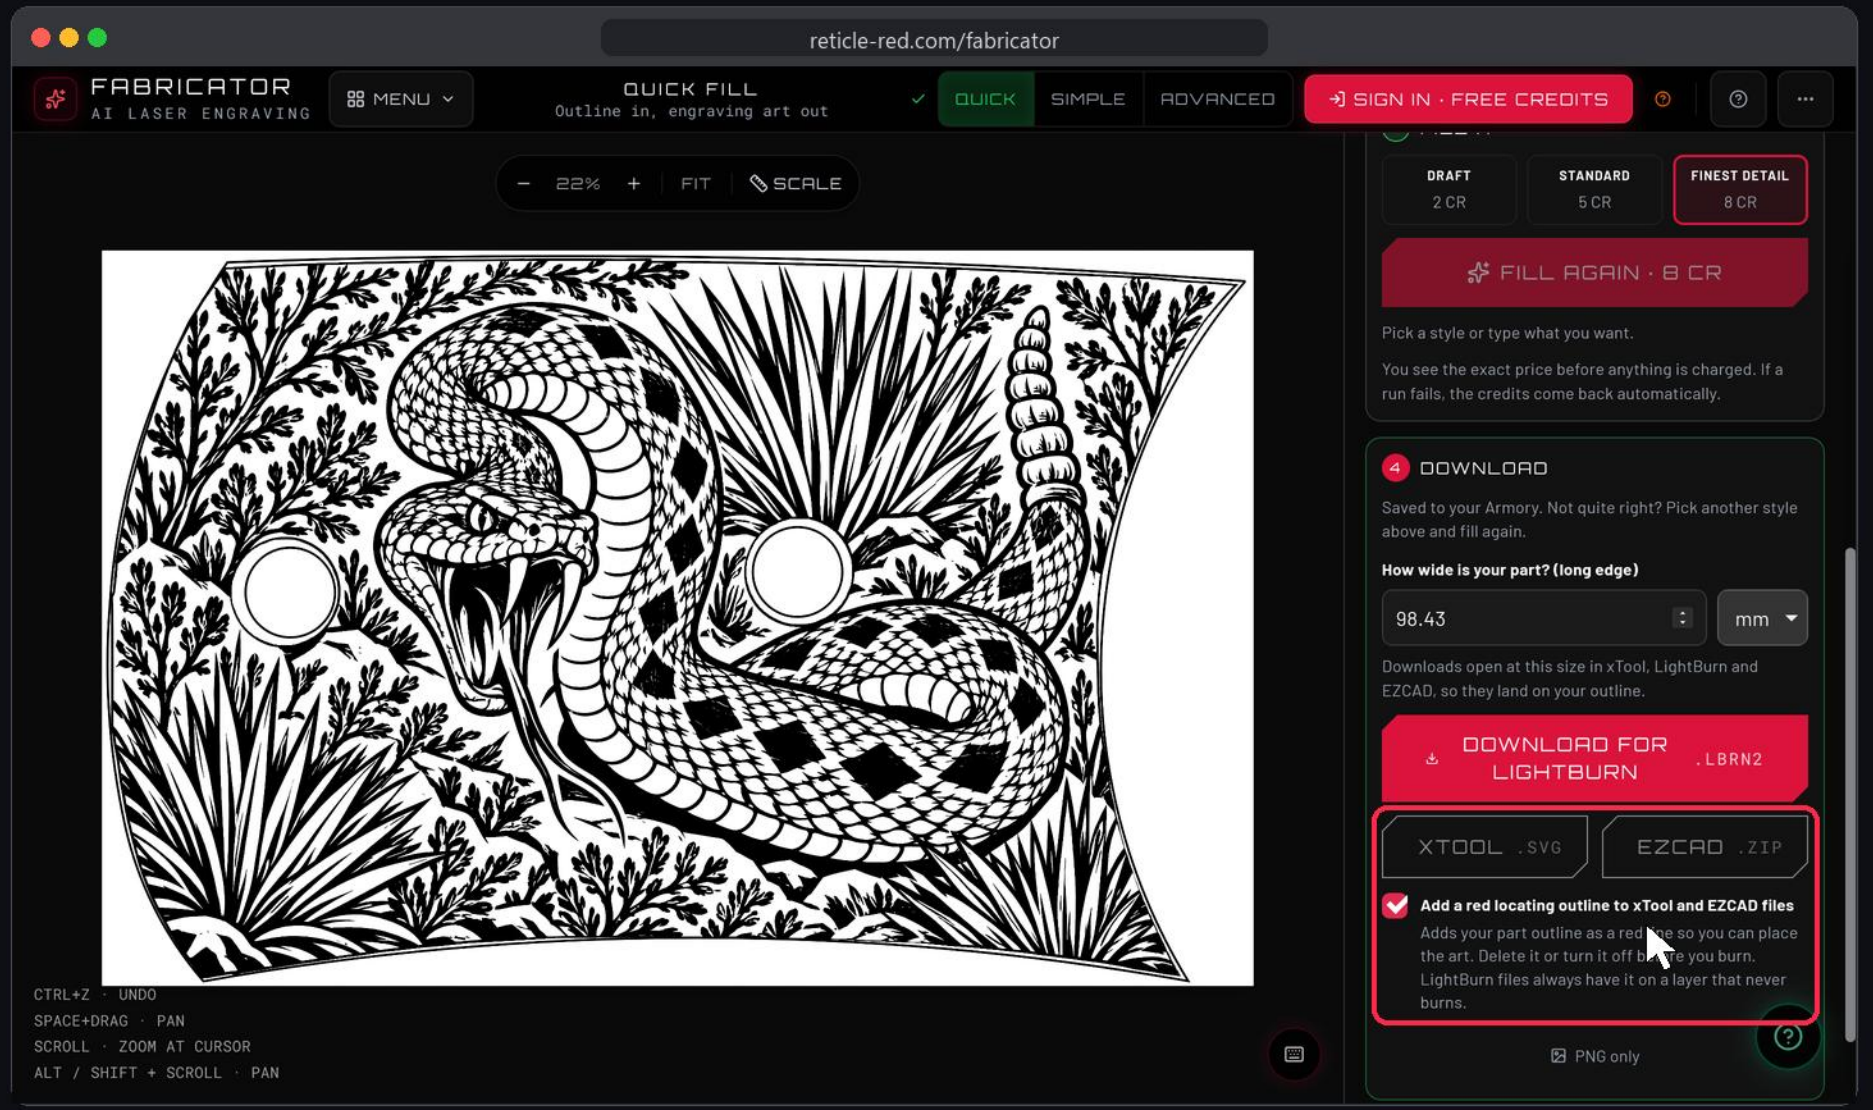
QUICK FILL ON A MAC

Step 4 of 4 · Download



STEP 4 OF 4

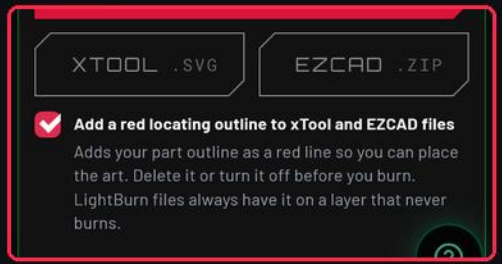
Download for xTool

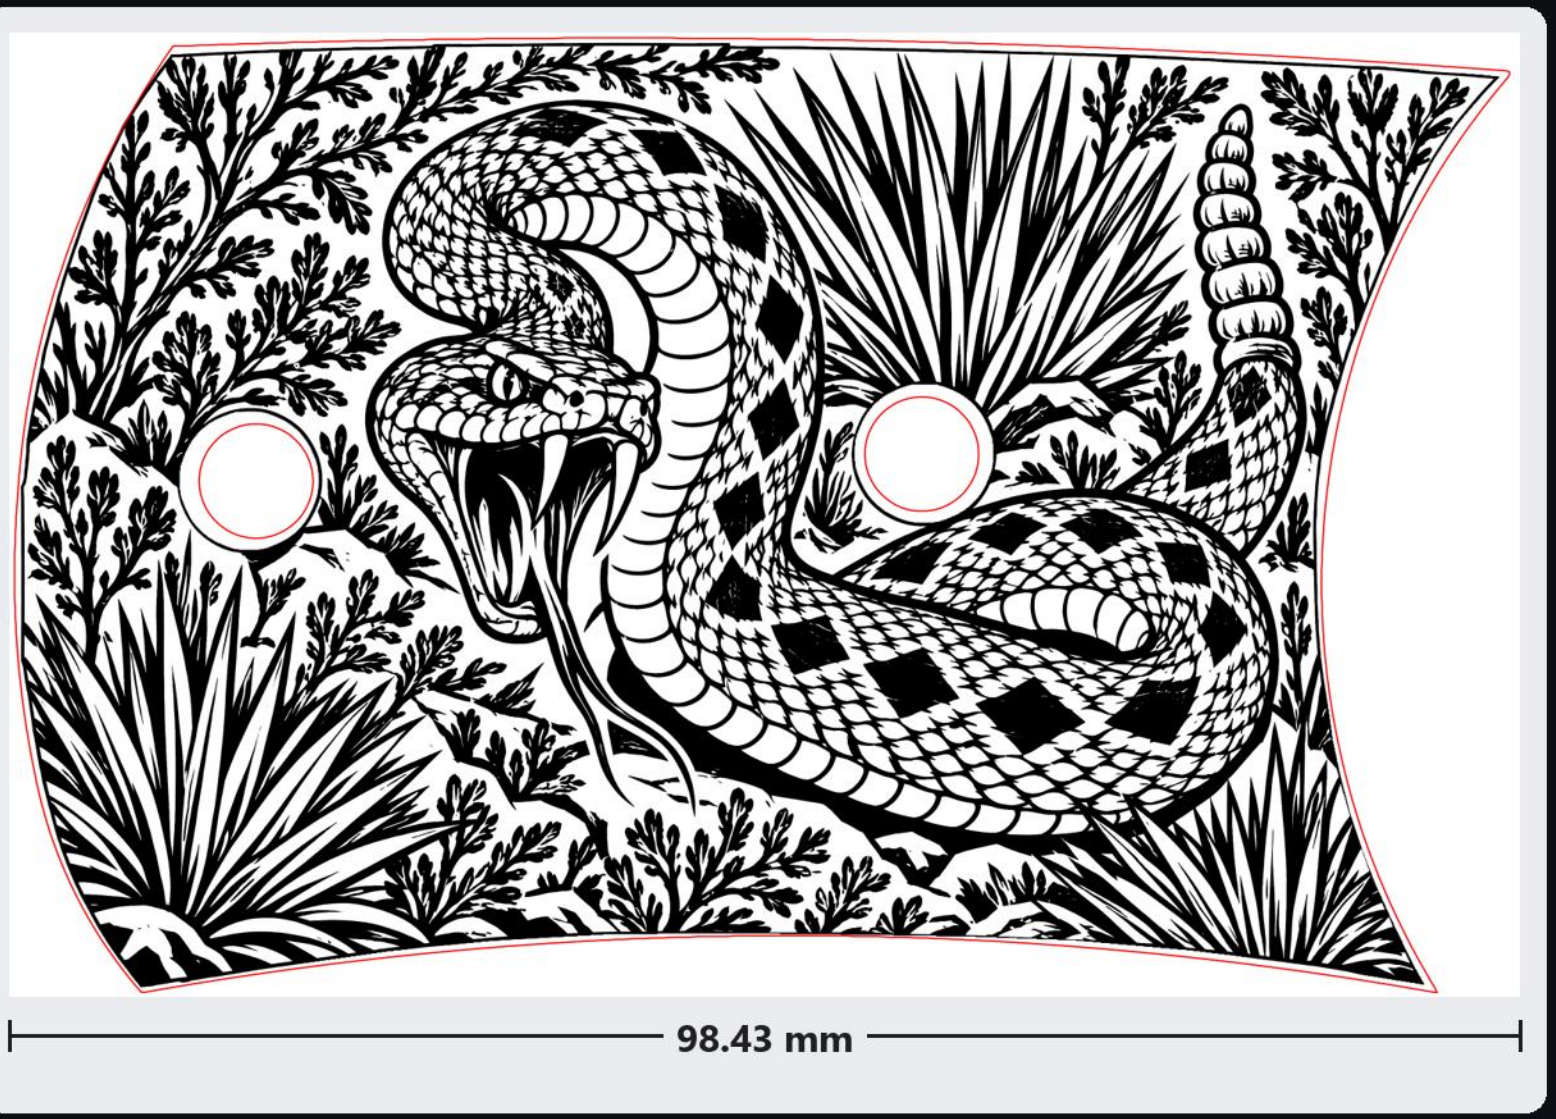
Tick “Add a red locating outline”, then click XTOOL .SVG.

Safari saves the file to your Downloads folder.

Using LightBurn? Click DOWNLOAD FOR LIGHTBURN. Its outline is on a layer that never burns.

CLOSE-UP





STEP 4 OF 4

Open it in xTool

Import the downloaded .svg into xTool Creative Space. It comes in at 98.43 × 62.82 mm, the size of your part.

Line the red outline up with your outline or your part on the bed.

Then delete the red outline, or set it not to process, before you burn.

This is the real file the xTool button made from that run: the art plus the red locating outline, sized from the SVG.

That’s it.

Upload an SVG from xTool and the size comes with it.

Pick a style, pick the detail, fill. The price shows first.

Download for xTool with the red outline, line it up, delete the line, burn.
